Technology Enhanced Learning Discovery Workshop

What is it?

It is a two hour workshop developed by Mark Bailye and Caroline Steel to explore institutional *successes and challenges* in relation to technology enhanced learning. The workshop uses a set of cards based on eight themes to stimulate conversations and trigger questions that uncover exemplary practices, challenge areas and institutional insights. A short institutional report is then generated with recommendations.

Strategy The institution has drivers in place to motivate and influence technology enhanced learning	**Learning Design** The technology enables pedagogically sound course designs to be easily created and replicated
Technologies The combination of technologies are robust and reliable and meet the learning needs of the institution	**Academic Adoption** Academics are aware of how to use the technology to enrich the learner's experience
Functionality The technology functionality supports and enhances teaching and learning activities	**Learner Impact** Learners are engaged in high quality technology enhanced learning experiences
Usability The technology is simple to use, easy to navigate and has a consistent look and feel	**Assessment & Feedback** The technology capabilities are fully utilised to support the assessment and feedback process

What's in it for me?

This workshop explores the pedagogical use of your technology ecosystem from multiple thematic areas to provide:

- insights into what is working well ☺ how to celebrate that
- insights into where challenges are arising ☹ what can be learnt from others and where we can help
- a set of recommendations ☺ that will help you get best return on investment from your institutional technologies

Where there are challenges ☹ we hope to be able to:

Share stories and best practices from customer's who are demonstrating exemplar practice	Focus regional **hands-on workshops, events and services** on helping your institution overcome these challenges
Deliver **webinars, including client led webinars**, that are tailored to discuss and address common challenges	Provide your institution with **recommendations on how we could help** you address these challenges
Establish a **regional community for learning designers and academics** to encourage peer support and practice sharing	Take the **suggested improvements to the software** your institution has identified back to our product team to review

Where there are successes ☺ we hope to be able to:

Capture your story to share and showcase the positive impact you have had with others	Invite you to present and talk about the successes you have been experiencing at **webinars and events**
Recognise and communicate to others the best practice your institution may have identified
